

Ajos BTL

NER300

The project

Technology category: Bioenergy

Location: Ajos, Kemi, Finland

Max. NER 300 funding: EUR 88.5 million

Final investment decision: December 2016

Entry into operation: December 2018

State of advancement

Environmental permitting is in progress.

Outlook for coming year

The first construction activities are expected to start in 2017.

Outlook for coming 5 years

The project aims at starting the production by the end of 2019

Project sponsor

Sunshine Kaidi New Energy Co. Ltd

Project summary

The Chinese bioenergy company Sunshine Kaidi New Energy Group Co., Ltd, being one of the biggest bioenergy companies in China, is in process to build a biofuel production plant in Ajos, Kemi, Finland.

Based on gasification of forest biomass and through FT-synthesis, the plant will produce up to 225 000 tons of biofuels and use approximately 1.8 million tons of biomass annually.
